

# Beyond

*Data Drives Action*

**Your data already exists. Beyond delivers it to decision-makers.**

## The Problem

Most companies already have:

- PLCs collecting operational data.
- ERPs managing business processes.

## But the information itself:

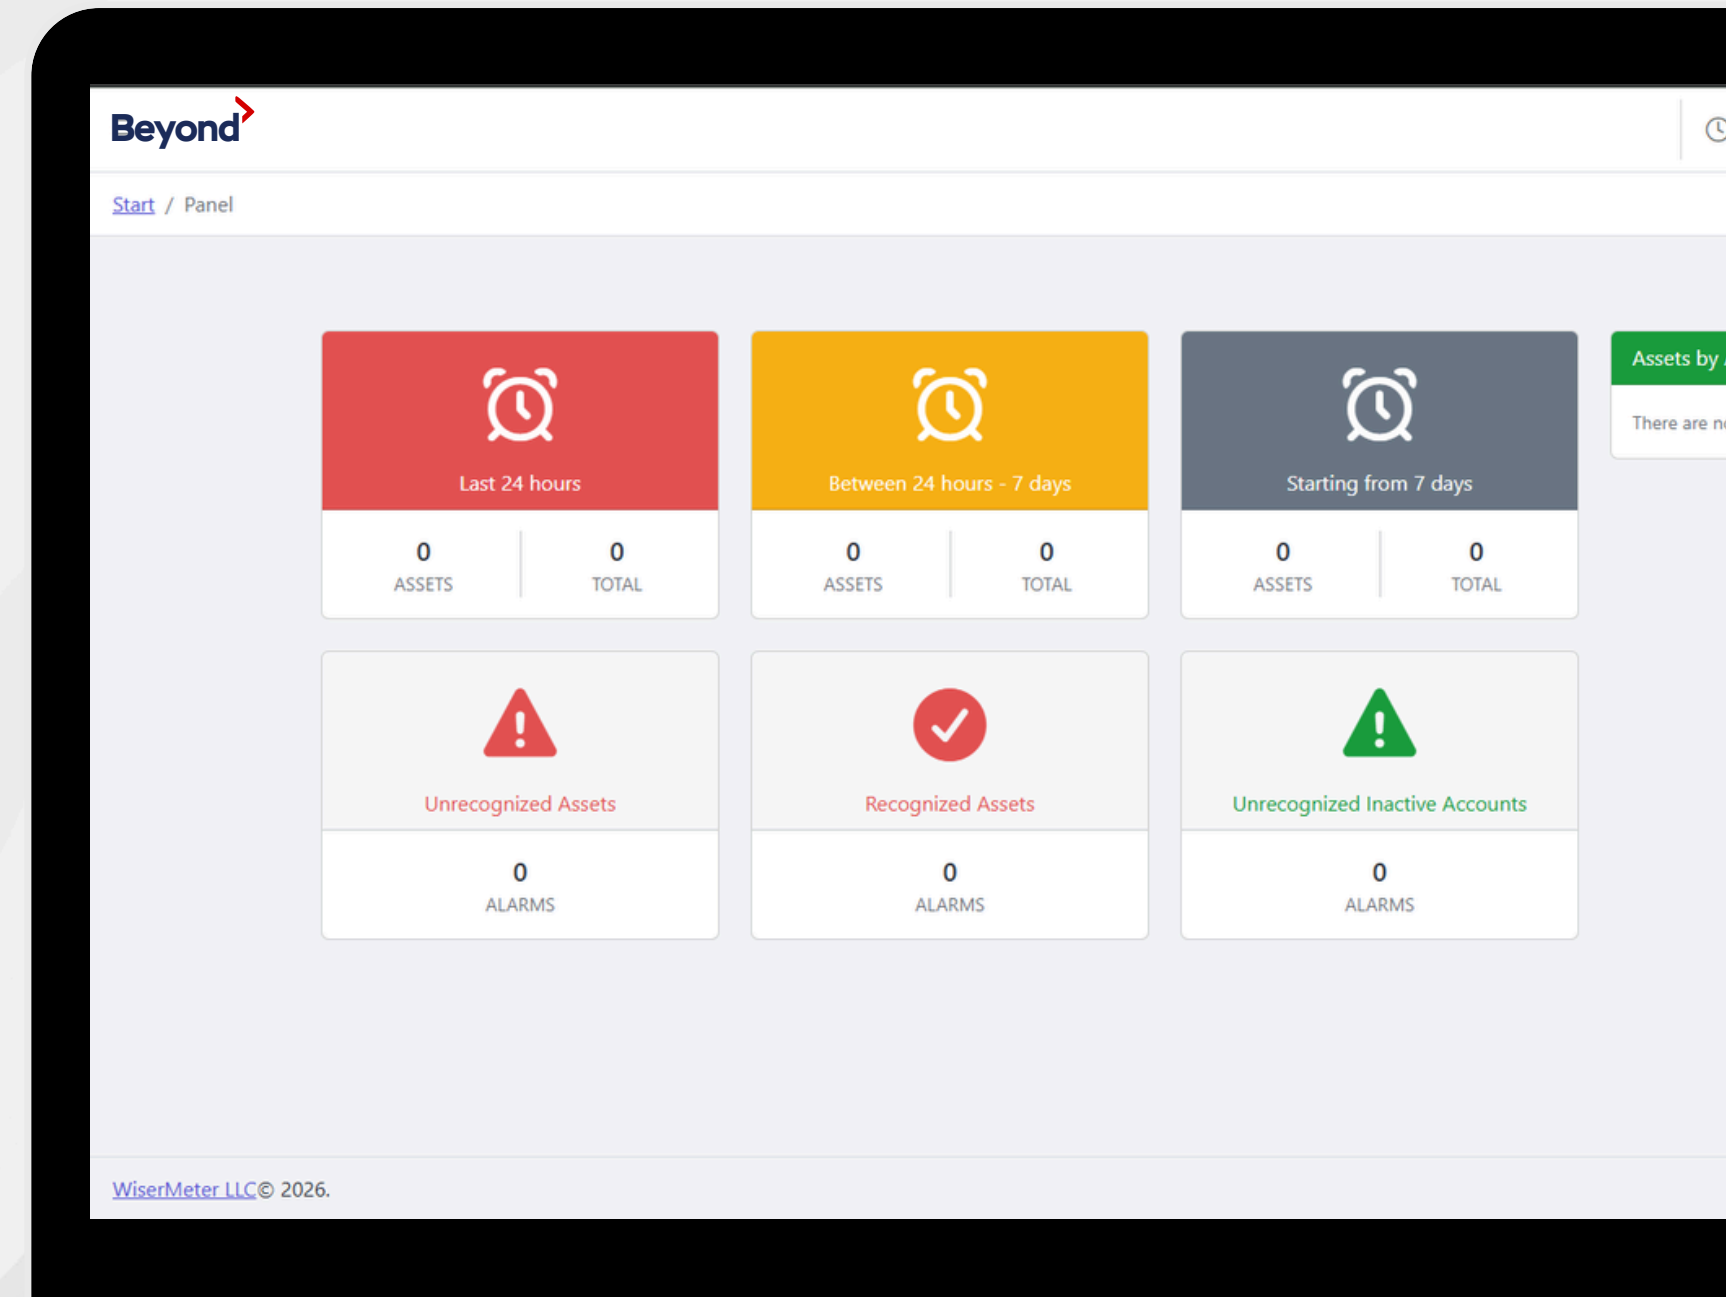

- Is siloed across departments.
- Relies on manual reporting.
- Reaches decision-makers too late.

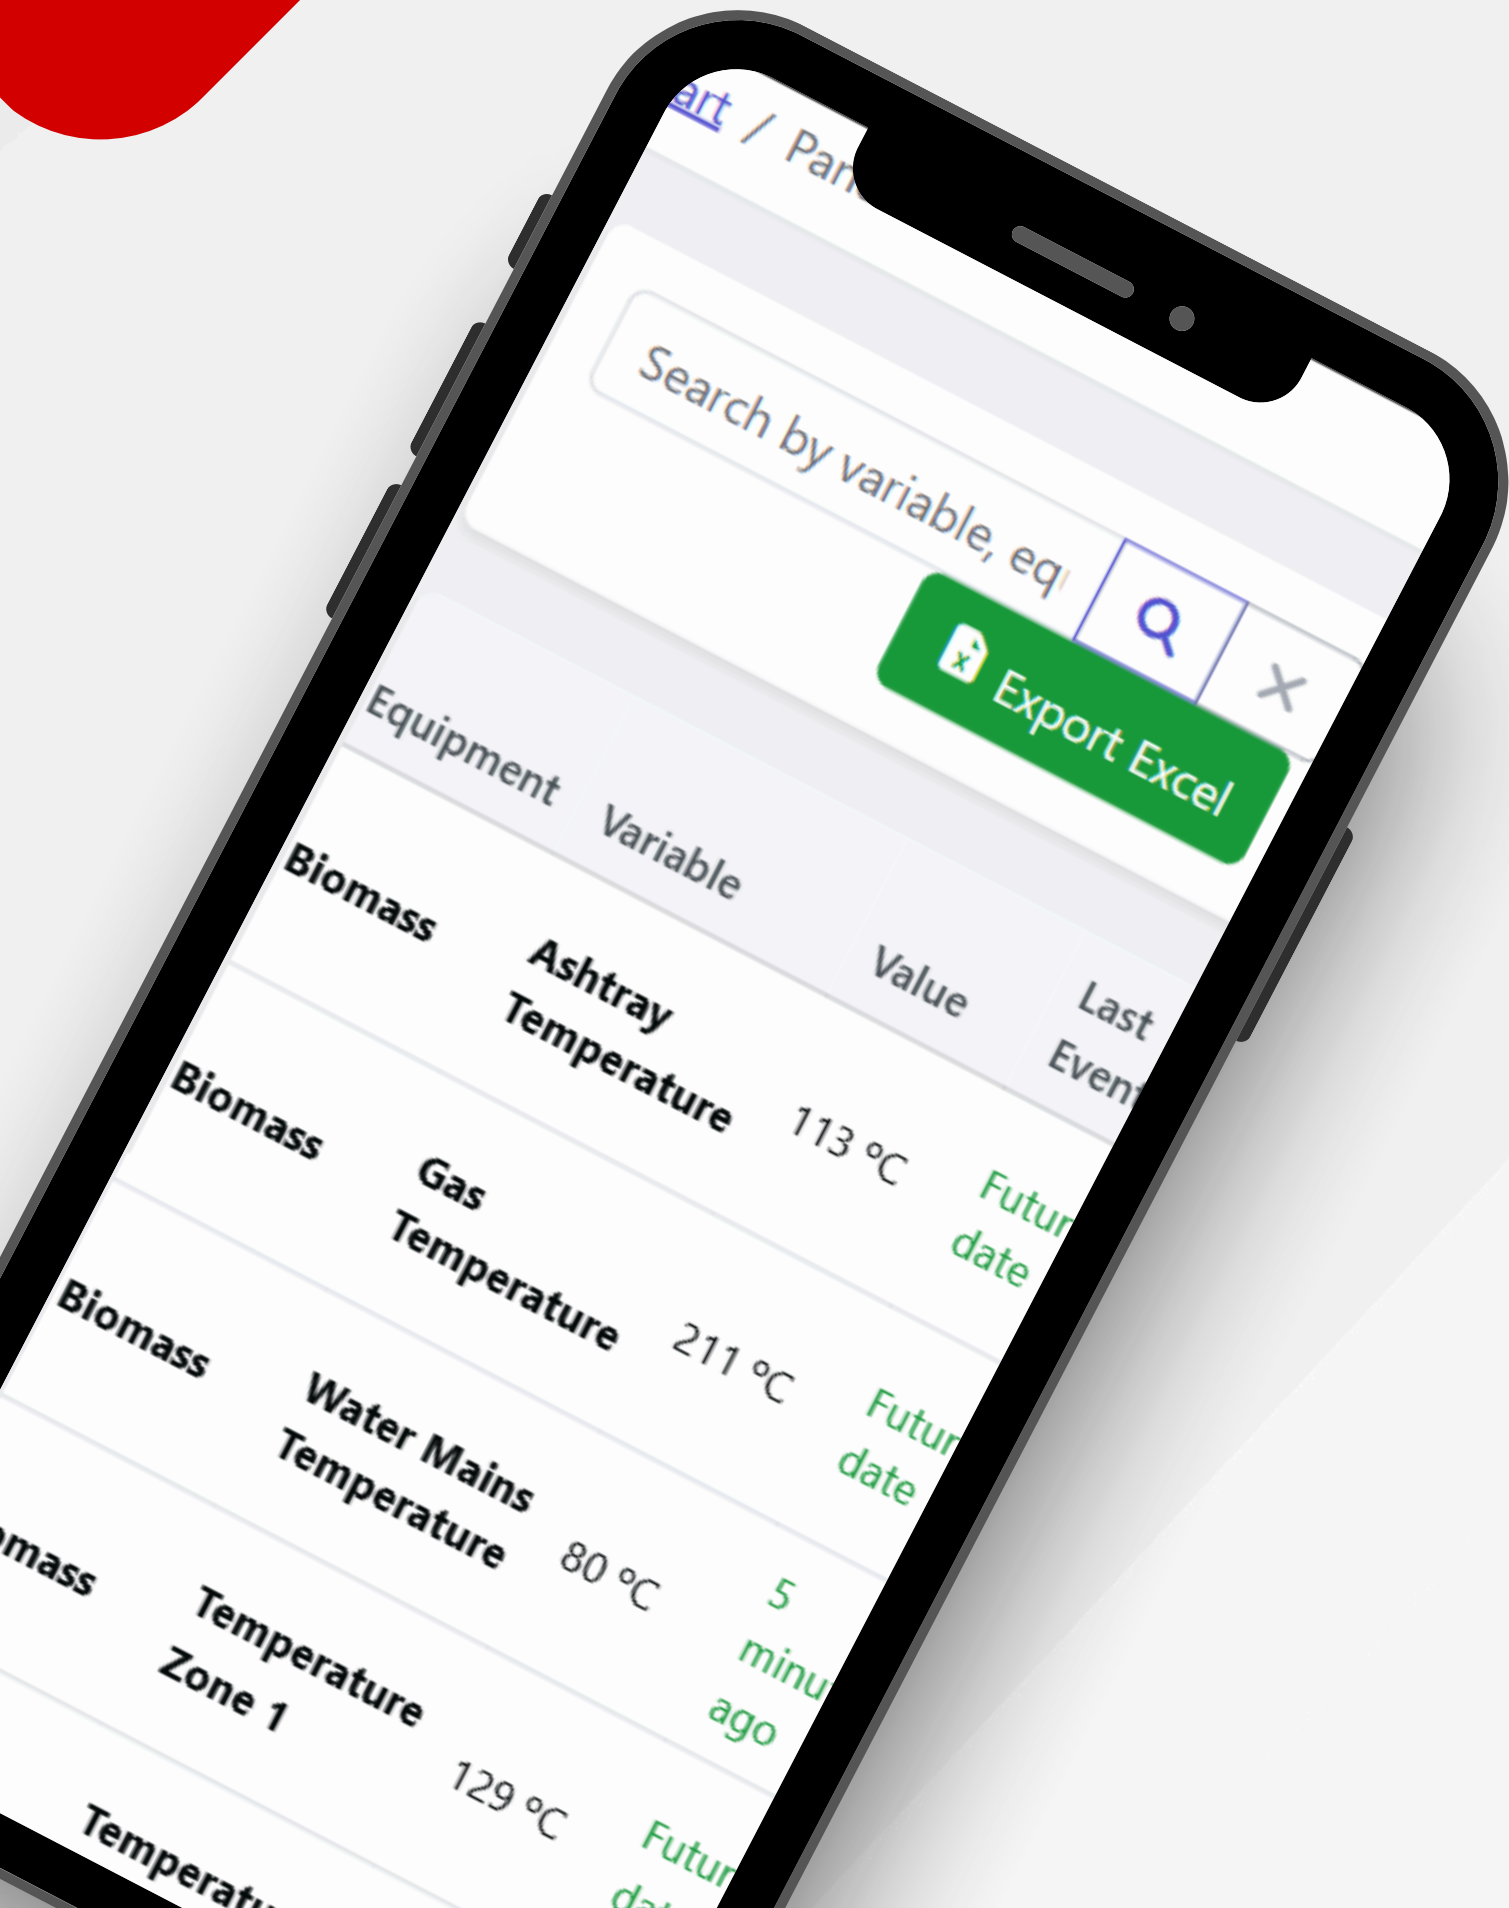

***Decisions stall because information doesn't flow.***

# The Solution

**Beyond connects systems, processes data, and delivers actionable information** directly to the people who need to act.

- *No intermediaries.*
- *No requests.*
- *No delays.*

# What Beyond Connects

- *PLCs and industrial automation.*
- *ERPs (SAP and others).*
- *HR systems.*
- *Weather data.*
- *Purchase orders, production data, and operational KPIs.*

**If the data matters, *Beyond integrates it.***

# How Information is Delivered

- *Whatsapp.*
- *Mobile app.*
- *SMS.*
- *Telegram.*
- *Microsoft Teams.*
- *Other channels on demand.*

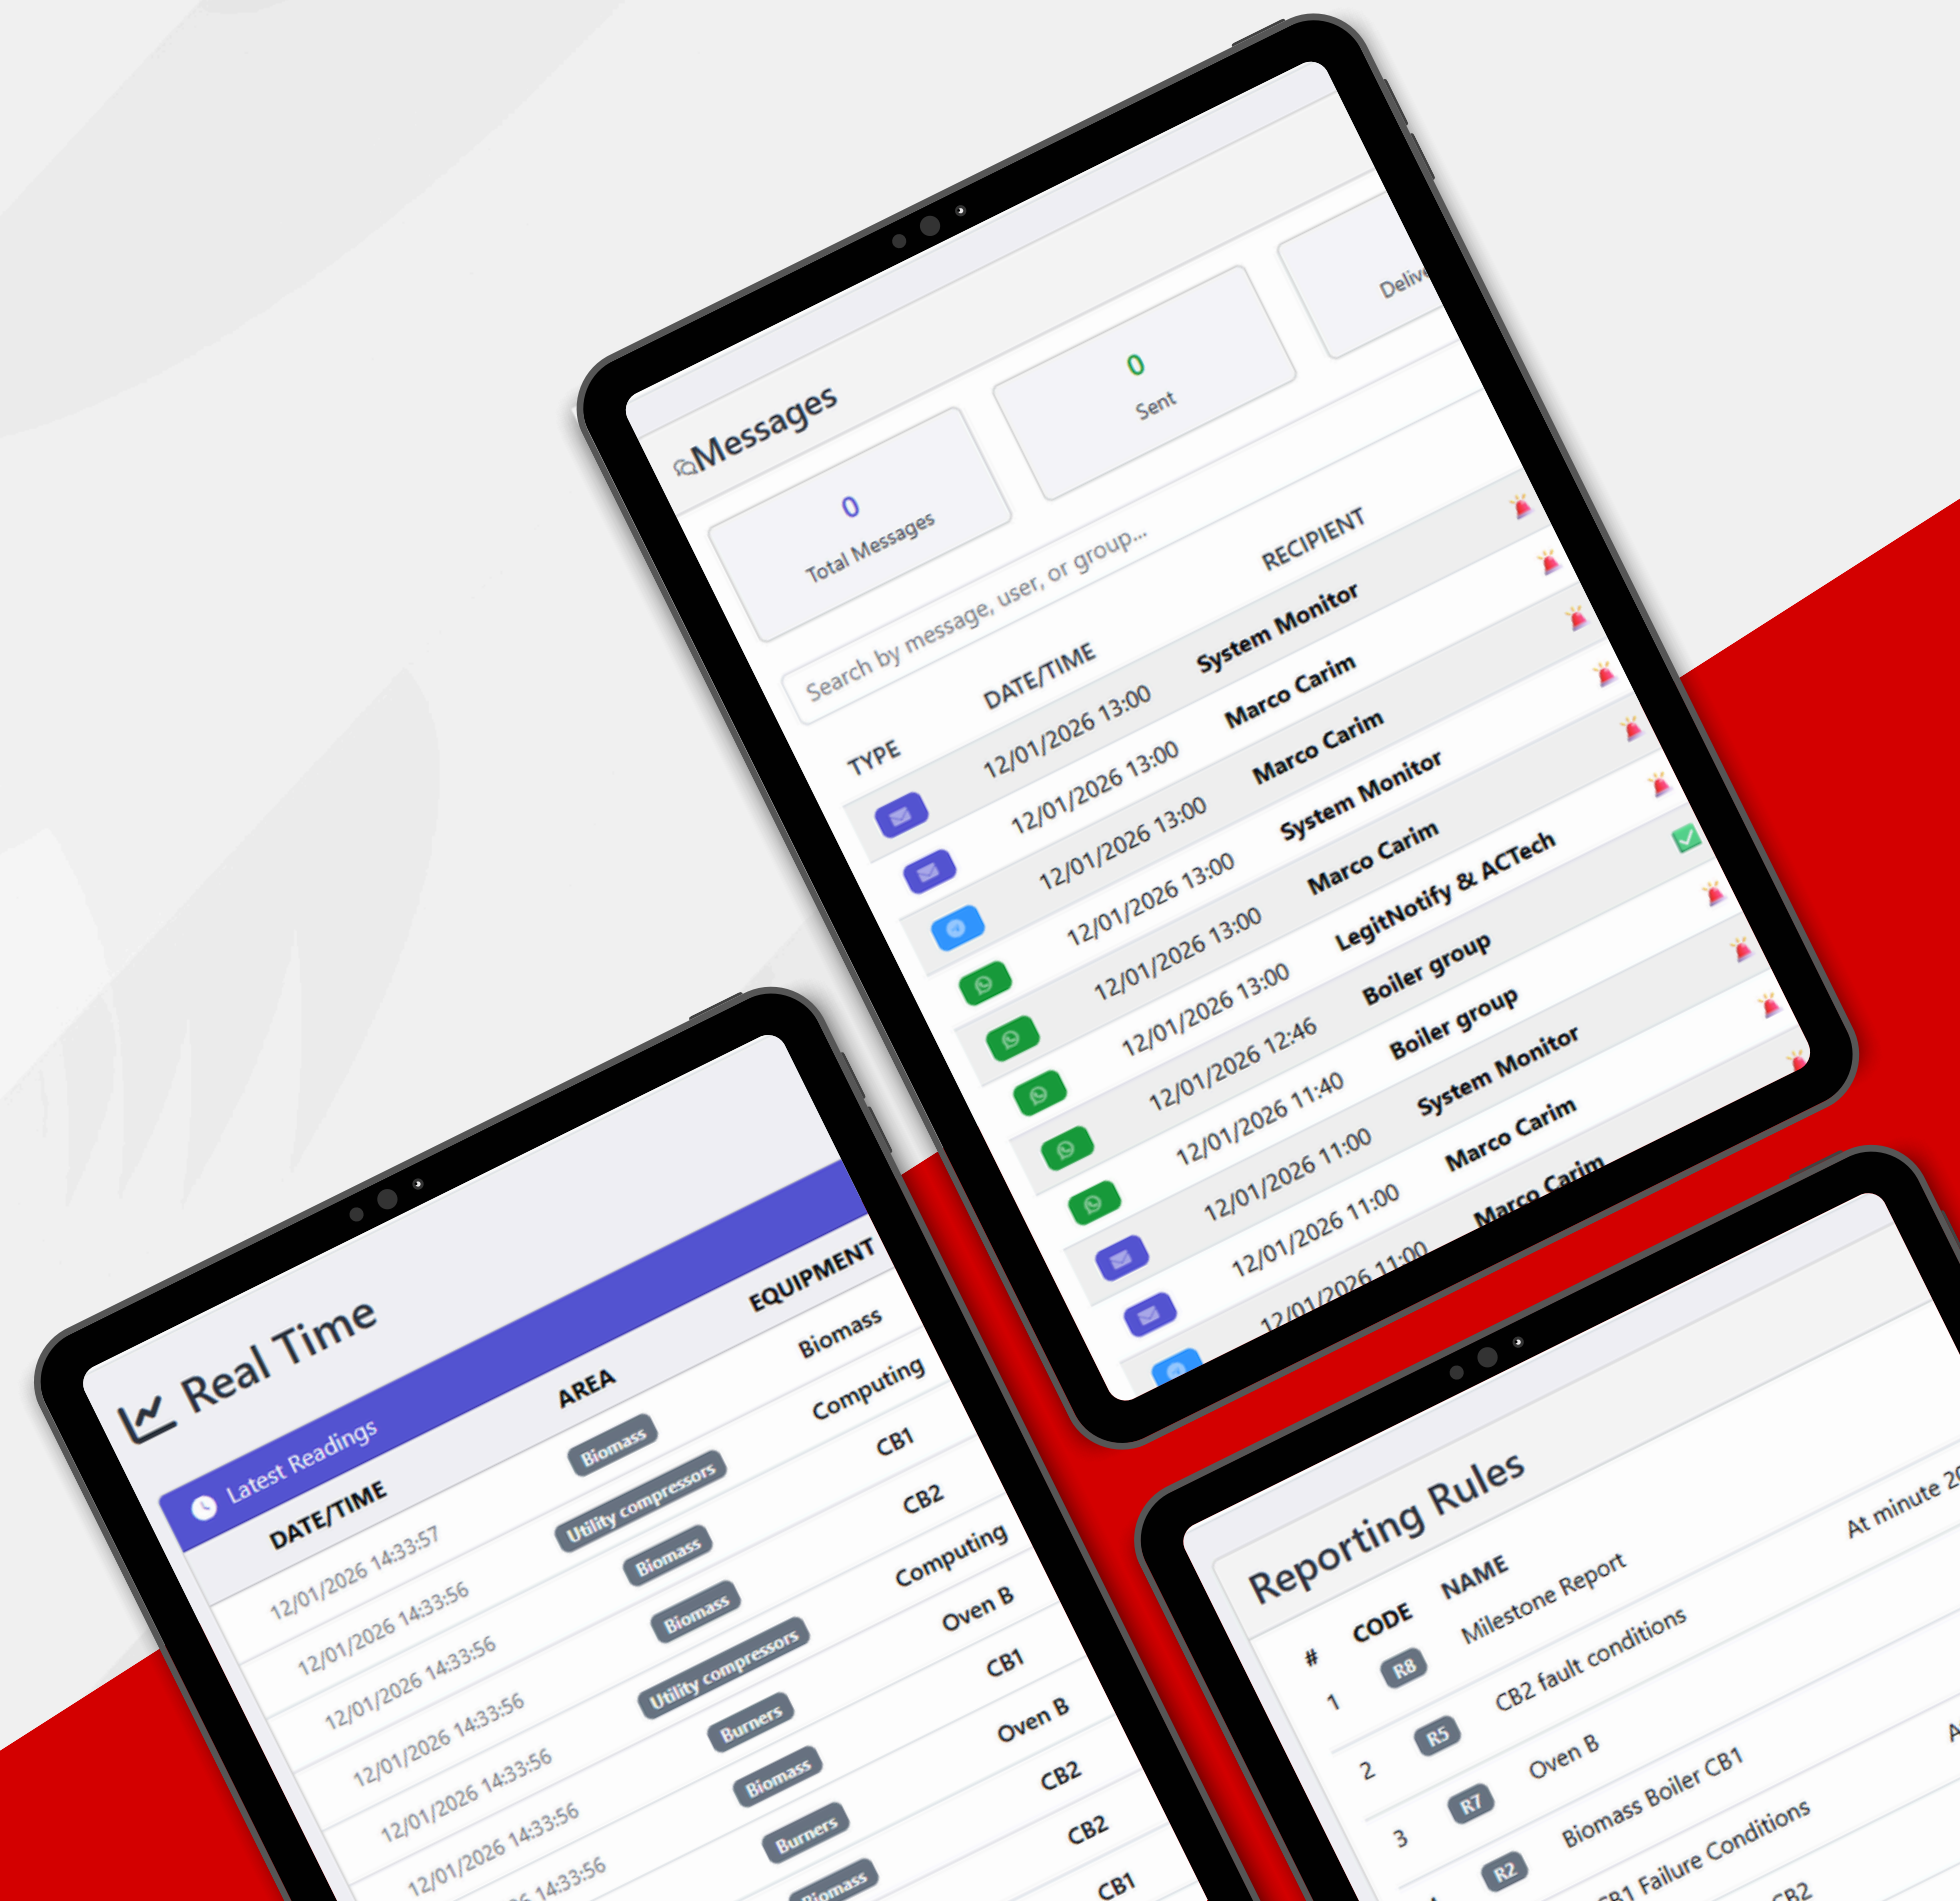

**Real-time, customizable insights —  
delivered where decisions happen.**

# The Result

- *Faster decisions.*
- *Less reliance on manual reporting.*
- *Greater autonomy for managers.*
- *Seamless communication across teams.*

## BEYOND IS NOT A DASHBOARD

*It's the intelligence layer between data and action.*
